#### Reading Goals Performance - Spring 2013-2014

Literature	201-212	Informational Text	200-211
Foundational Skills and Vocabulary	206-217		
Lexile® Range	645-795L		

6

This report displays current and past RIT scores of a student. RIT stands for Rasch Unit, which is a unit of measure that uses individual test question difficulty values to estimate student achievement.

The RIT is used to measure how "tall" a student is on the curriculum scale and scores can be compared to tell how much growth a student has made, similar to measuring height on a yardstick. This score is independent of the age or grade of the student but reflects the instructional level at which the student is currently performing, helping teachers plan instruction at an appropriate level for the student.

<p><b>1. Student RIT</b>—The student's RIT score on each growth test</p>	<p><b>7. Growth Comparison Period</b> – The terms that define the time frame for which the RIT Growth, Growth Projection and Student RIT Projection value(s) are calculated. Indian Hill is using a fall to fall comparison.</p>
<p><b>2. District Grade Level Mean RIT</b> – The average RIT score for students in the same school district and same grade that were tested at the same time as the student named on this report.</p>	<p><b>8. Term/Year</b> – The test term (FA=fall, SP=spring, WI=winter, SU=summer) and the year when the student took the test.</p>
<p><b>3. Norm Grade Level Mean RIT</b> – The average RIT score for students in the same grade and tested in the same term as observed in the most recent NWEA RIT Scale Norms study. Lack of the Norm Grade Level Mean RIT bar indicates that the RIT is not available due to no norm data being available for that particular grade and/or subject.</p>	<p><b>9. Grade</b> – Grade of the student when the test was taken.</p>
<p><b>4. Student RIT Projection</b> – The projected RIT score of the student for when they take a future test (as noted above the span is fall to fall). This projected RIT score is based on the student's actual RIT score in the first term of the Growth Comparison Period and the average RIT growth of students who were in the same grade and tested in the same term as observed in the most recent NWEA RIT Scale Norms* study.</p>	<p><b>10. RIT</b> – The middle number is this student's RIT score. The numbers on either side of the RIT score define the score +/- the standard error. If retested soon, the student's score would fall within this range most of the time.</p>
<p><b>5. Goals Performance</b> – Each goal area included in the test is listed along with a goal range of the student's score.</p>	<p><b>11. RIT Growth</b> – Presents the student's growth in RIT points made between growth tests in the Growth Comparison Period after several administrations (fall to fall).</p>
<p><b>6. Lexile® Range</b> – This range appears when the student has taken a reading test. This measure can help match a reader with reading material that is at an appropriate difficulty, or help give an idea of how well a reader will comprehend a text. Lexile® is a trademark of MetaMetrics, Inc.</p>	<p><b>12. Percentile Range</b> – The number in the middle is this student's percentile rank, or the percentage of students that had a RIT score less than or equal to this student's score according to the most recent NWEA RIT Scale Norms study. The numbers on either side of the percentile rank define the percentile range. If retested soon, this student's percentile rank would be within this range most of the time.</p>
